AMOD-P passive building blocks for the converters

Jason Gallicchio and Claude, rev A, 2026-10-25 github.com/gallicchio/AMOD-and-RFMOD

AMOD-P: passive building blocks for the FPGA tutorial's converters. Each tile is one circuit with its own SMA jacks: cable DAC OUT to a tile's IN and its OUT to ADC IN. Every jack takes +-4 V. No power. The handbook has each tile's expected response. P13 wants a ferrite-rod coil (about 330 uH) along this edge, under cable ties through the slots.
